Global link popularity of web site

Essential

The global link popularity measures how many web pages link to your site. The number of web pages linking to your site is not as important as the quality of the web pages that link to your site.

All major search engines take the quality and the context of the links into account. Search engines assume that your web page must offer relevant content if many quality sites link to it.

Number of inbound links according to these search engines (the more the better)

	Alexa	AllTheWeb (preset settings)	Google.com	Live.com	Yahoo.com
To Your Site:	n/a	2,350	40	28	2,498
To Site 1:	n/a	163	6	13	151
To Site 2:	n/a	99	0	0	87
To Site 3:	1,571	4	0	0	4
To Site 4:	1,571	0	0	0	0
To Site 5:	93	2	0	0	2
To Site 6:	n/a	1	3	0	1
To Site 7:	1	9	0	0	7
To Site 8:	1	29	0	0	28
Range:	1 to 1,571	1 to 163	0 to 6	0 to 13	1 to 151

Advice for the global link popularity

Summing up all analyzed search engines, you have more web pages linking to your web page than the top ranking web pages. This is very good. However, Google.com also evaluates the quality of the web pages that link to your web site. <

To get more quality links pointing to your site, use IBP's directory submission tool and IBP's link management tool.

Google found more web pages that link to your web page than to the top ranked pages. This is very good. However, Google also evaluates the quality of the web pages that link to your web site. <

Link texts of inbound links

Essential

Inbound links are links from other web sites to your site. If many other sites link to your site, then search engines consider your site to be important. However, the number of links is not as important as is the relevance of the linking page and the link text used in linking to your site.

This chapter lists a sampling of the web pages that link to your site, along with the link text. Note that search engines do not reveal all inbound links to your site.

The more inbound link texts are analyzed, the more meaningful is the quality of the advice. To get statistically significant results, you should analyze at least 50 inbound link texts. You can change the number of analyzed inbound link texts by selecting Top 10 Optimizer > Report Contents > Link Popularity.

Advice for the link texts of inbound links

To get a high ranking on Google.com, make sure that the web pages that link to your site use the search term "D9 Hosting" in their link texts. The more links to your web site contain "D9 Hosting" (or a part of it) in the link text, the more likely it is that your web site will get a high ranking on Google.com for that search term.

It is advisable to use different but related keywords for the link texts. If all links to your web site use exactly the same link text, then Google.com might lower your rankings because of unnatural linking patterns.

In addition, the quality and reputation of the web pages that link to your site is very important to the search

Keyword use in body text

Essential

The body text is the text on your web page that can be seen by people in their web browsers. It does not include HTML commands, comments, etc. The more visible text there is on a web page, the more a search engine can index. The calculations include spaces and punctuation marks.

Age of web site

Very Important

Spam sites often come and go quickly. For this reason, search engines tend to trust a web site that has been around for a long time over one that is brand new. The age of the domain is seen as a sign of trustworthiness because it cannot be faked. The data is provided by Alexa.com (or Archive.org if Alexa.com does not have data about a site).

Dates of the domain registration or of the first contents

Advice for the web site age

The older your web site, the better it is for your rankings on Google.com. Your web site appears to be not very old so you must compensate by improving other search engine ranking factors.

Keyword use in H1 headline texts

Very Important

H1 headline texts are the texts that are written between the <h1>...</h1> tags in the HTML code of a web page. Some search engines give extra relevance to search terms that appear in the headline texts. This chapter examines if this applies to Google.com, too.

Example: <h1>your very big headline text</h1>

Keyword use in domain name

Important

The domain name is the main part of the web page address. This chapter tries to find out if Google.com gives extra relevance to search terms within the domain name.

Example: "your-keyword" is the domain name of <http://www.your-keyword.com>

Keyword use in page URL

Important

The page URL is the part after the domain name in the web page address. This chapter tries to find out if Google.com gives extra relevance to search terms within the page URL. Separate your search terms in the page URL with slashes, dashes or underscores.

Example: "keyword/another-keyword.htm" is the page URL of <http://www.domain.com/keyword/another-keyword.htm>

Links from social networks

Important

On social network sites, people decide which web sites are popular. This means that the popularity on social network sites cannot be easily influenced. For this reason, search engines might trust web sites more if they are popular on social networks. ("n/a" means "data not available".)

Links from social networks (the more the better)

	Del.icio.us	Digg

To Site 6:	n/a	0
To Site 7:	n/a	0
To Site 8:	n/a	0
Range:	2 to 3,075	0 to 73

Advice for the links from social networks

None of the selected social network sites found pages that link to your web site "www.d9hosting.com". Try to get at least one web page to link to your web page on these social networks.

<<

To get more quality links pointing to your site, use IBP's directory submission tool and IBP's link management tool.

Server speed

Important

Popular web sites often have faster server response times compared to smaller unimportant sites. In addition, most search engines index more pages from fast web sites. This chapter shows you how long it takes on average for web pages on the top ranked sites to load. The data is based on the average server speed of the last 30 days and is provided by Alexa.com ("n/a" means that Alexa.com does not have data about your server speed).

Server speed results

Average Page Load Time (measured in seconds, the lower the better)

Your Site	1	2	3	4	5	6	7	8	Range
n/a	n/a	n/a	3.78s	3.78s	1.58s	n/a	n/a	n/a	1.58s to 3.78s

n/a	n/a	n/a	slow: bottom 30%	slow: bottom 30%	fast: top 30%	n/a	n/a	n/a	slow: bottom 30% to fast: top 30%

Advice for the server speed

The speed of your web site could not be determined. In general, the faster your web site, the better it could be for your rankings on Google.com. If you have a slow web site, you should contact or even switch your web hosting provider.

Keyword use in H2-H6 headline texts

Important

H2, H3, H4, H5 and H6 headline texts are the texts that are written between the <h2>...</h2>, <h3>...</h3>, etc. tags in the HTML code of your web page. Some search engines give extra relevance to search terms that appear in the headline texts. This chapter examines if this applies to Google.com, too.

Example: <h3>your big headline text</h3>

Keyword use in IMG ALT attributes

Important

The attribute defines an alternative text for an image when the user uses a text browser or when the user has turned off the display of images in the web browser application. Microsoft's Internet Explorer displays the alternative text if the user puts the cursor over the graphic. This chapter tries to find out if it makes sense to include the search term in the attributes to improve your rankings.

Top level domain of web site

Important

Web sites with certain top level domains (TLD) are statistically more likely to contain higher quality, trustworthy contents. For this reason, search engines might prefer web sites with restricted TLD (.edu, .gov., .mil) over younger TLD (e.g., .biz, .info, .jobs). In addition, country code TLD (e.g., .ca, .de, .fr) are often preferred in the country's local search results.

Advice for the top level domain of your web site

Your web site URL www.d9hosting.com contains the often used top level domain .com. This is neither good nor bad for your rankings on Google.com. OK

Keyword use in bold body text

Important

The body text is the text on your web page that can be seen by people in their web browsers. The bold body text uses a darker and heavier face than the regular type face. It appears between `...` or `...` tags in the HTML source of your web page. CSS is not recognized. The statistics include spaces and punctuation marks.

Number of visitors to the site

Important

Search engines might look at web site usage data, such as the number of visitors to your site, to determine if your site is reputable and contains popular contents. The Alexa.com traffic rank is based on three months of aggregated traffic data from millions of Alexa Toolbar users and is a combined measure of page views and number of site visitors.

Keyword use in meta description

Moderately Important

The Meta Description tag allows you to describe your web page. This chapter tries to find out if Google.com takes the Meta Description tag into account. Some search engines display the text to the user in the search results.

Example: <meta name="description" content="This sentence describes the contents of your web site.">

Even if the Meta Description tag might not be important for ranking purposes, you should use the Meta Description tag to make sure that your web site is displayed with an attractive description in the search results.

Number of trailing slashes in URL

Moderately Important

The number of trailing slashes (/) in the URL indicates where a web page falls in a site's overall hierarchy. If the URL contains many trailing slashes, meaning it is placed in a sub-sub-directory, then the webmaster does not seem to think that the page is important in relation to the other pages.

Number of trailing slashes

Your Site	1	2	3	4	5	6	7	8	Range
0	0	0	3	2	0	0	2	0	0 to 3

Advice for the number of trailing slashes in your web site URL

The URL www.d9hosting.com does not contain more or less trailing slashes than the top ranked pages. This means that you do not have to change the number of trailing slashes in your URL.

OK

HTML validation of web page to W3C standards

Slightly Important

Web pages are written in special languages called HTML and CSS. Like any language, HTML and CSS change constantly. The World Wide Web Consortium (W3C) is the governing body that establishes what is valid HTML/CSS and what is not. Search engines obey the HTML/CSS standard. If there are errors in the HTML/CSS code of your web page, then search engines might not be able to read everything of your web page.

Validation results

	Validity
HTML:	28 errors, not valid http://validator.w3.org/check?uri=http://www.d9hosting.com/
CSS:	no errors, valid http://jigsaw.w3.org/css-validator/validator?uri=http://www.d9hosting.com/

Advice regarding the validity of your web site

The HTML validation of your web page www.d9hosting.com failed. This means that Google.com might not be able to read your web page. You should fix any HTML errors.

Readability level of web page

Slightly Important

The Flesch Reading Ease test is a United States governmental standard to determine how easy a text is to read. It measures the approximate level of education necessary to understand the web page content. Higher scores indicate the text that is easier to read, and lower numbers mark harder-to-read texts. Scores among different languages are not comparable.

Readability results

Flesch Reading Ease Score (0-100, higher score means that the text is easier to understand)

Your Site	1	2	3	4	5	6	7	8	Range
66	67	71	73	68	77	74	81	n/a	67 to 81

Flesch-Kincaid Grade Level (shows the number of years of education required to understand the text)

Your Site	1	2	3	4	5	6	7	8	Range
8	8	7	5	5	6	7	5	n/a	5 to 8

Advice for the readability of your web site

The Flesch Reading Ease Score of your web page www.d9hosting.com is 66. A score of 60 to 80 is considered to be optimal. This means that the text of your web page is easy to comprehend.

OK

Keyword use in meta keywords

Slightly Important

The Meta Keywords tag allows you to define which search terms are important to your web page according to your opinion. It should be placed between the <head>...</head> tags in the HTML code of your web page. This chapter tries to find out if Google.com gives relevance to search terms in the Meta Keywords tag.

Example: <meta name="keywords" content="keyword, another keyword">

Keyword use in the first sentence of the body text

Slightly Important

The first sentence of the body text is the first sentence after the <body> tag in the HTML code of your web page. Some search engines give more relevance to search terms when they appear in the first sentence. Some will use your first sentence as the description of your page on the search result page.

Example: <body>Here goes the first sentence. This text is not the first sentence.

Search engine compatibility

This chapter examines the general search engine compatibility of your web page.

Advice

Search engines need text to index your web pages, to determine the theme of your web site and to produce a site summary. They cannot read what is written on your graphical images or in a Flash movie. Google recommends to create a useful, information-rich site. Fresh, continuously updated content is one of the best ways to ensure that search engines return to your web site (and your visitors, too). Your web page "www.d9hosting.com" contains 340 words which should be enough for search engines.	OK
Some search engines penalize web sites if the search terms of the Meta Keywords tag don't appear in the body text of the web page. You don't use the Meta Keywords tag so there will not be any problems with the search engines in this aspect.	OK
Your web page doesn't use the Meta Refresh tag so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use the Meta Robots tag so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use the Meta Title tag so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use any Dublin Core meta tags so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use any Meta tags twice so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use the <title> tag twice so there won't be any problems with search engines in this aspect.	OK
Some search engines and directories don't accept submissions with capitalized letters in the document title or in the meta tags. Your web page doesn't use all capitalized letters in those web page elements so there won't be any problems with the search engines in this aspect.	OK
Your web page uses 307 bytes of script code which makes it harder for search engines to index your page. Consider putting the script code in an external file with the <script src="myscripts.js"></script> commands. The file "myscripts.js" should be a simple text file that contains only the script code without any HTML markup. The next time your page is spidered by the search engine robots, the important content on your page will be closer to the top of the page, and you might have a better keyword density.	<<
Your web page uses style sheet code in an external file so you've already minimized the problems with style sheets and the search engines.	OK
Your web page doesn't use frames so there won't be any problems with the search engines in this aspect.	OK
Some search engines consider tiny text (i.e. font size 1) as an attempt to fool the search engines. Some webmasters have abused tiny text in the past to hide dozens of keywords on a web page that human web surfers cannot see. Your web page doesn't seem to use tiny text so there shouldn't be any problems with the search engines in this aspect.	OK
Your web page URL "www.d9hosting.com" doesn't indicate a dynamically served web page so there shouldn't be any problems with the search engines in this aspect.	OK
Your web page URL "www.d9hosting.com" doesn't contain any of the special characters "&", "\$", "%", "?" or "=" in it so there shouldn't be any problems with the search engines in this aspect.	OK
Some search engines and directories rank web sites lower that are hosted at free web space providers, or if web sites don't have their own domain name. Some search engines also limit the number of web pages they'll index	OK

Advice

from a single domain. Your web site doesn't seem to be hosted at a free web space provider. If it does, consider getting your own domain name.

Factors that could prevent your top ranking

Some ranking factors cannot be measured because the search engines do not reveal the necessary data, or it would be extremely time-consuming to measure the data. Make sure you pay attention to the following factors because they could prevent a top ranking for www.d9hosting.com on Google.com.

Advice

Inbound links to your web page

Are the web pages linking to your web page relevant to the search term "D9 Hosting"?

How fast does your web page get new links pointing to it?
